Boom Lifts

Boom Lifts Training Cambridge - Boom Lifts are a table lift apparatus which can be raised or lowered to differing heights, making this apparatus a nifty tool for various industrial uses. There are many different variations of Boom Lift consisting of knuckle booms, scissor lift trucks, and aerial lifts, each functioning in a different way.

Aerial platform lifts are most normally utilized to carry people at snowboard lodges who are not at ease with a snowboard lift. These lifts operate much like an elevator, skiers can be slowly but surely moved up the mountain, stopping at stations along the way until they contact the top. Aerial platform lifts are also utilized in construction, moving workers securely up and down the sides of multi-level construction sites.

Scissor hoists are quite frequently used by utility providers as the best way to securely permit workers to repair and work on cables and wires attached to poles. Telephone, cable and power providers have relied on the proficiency of this style of boom jack for years.

Knuckle boom vehicles are designed to be used in coarse terrain locales where the need to be able to change direction is necessary. This type of boom is capable of fitting into various tights spaces that a scissor lift cannot. Working among multiple machines in a manufacturing facility or in near proximity sandwiched between two walls, the knuckle boom also features a standard table equipped with rails for security and employee safety.

Based on the job requirements and the sort of work to be completed will establish the proper model of boom jack to decide on. Fortunately, there is a version suitable for nearly any application.
