Crane Operator Certification Cambridge

Crane Operator Certification Cambridge - Crane Operator Certification is a process that permits people to earn a certificate to be able to operate specific types of cranes. Certification involves hands-on practice, classroom learning and an ability assessment. Various training programs are available for mobile cranes, overhead cranes, tower cranes, forklifts, boom trucks and various hoisting machines. Trainees will know the basics of safety, equipment characteristics, and operational practices associated with these types of cranes.

Customized Practical Evaluation and Training:

The on-site practical evaluation and training could be customized by each company after the in-class session. At any time, two operators will be trained by one instructor. The length of time needed for training will differ depending on machine type and the employees' levels of ability, but normally needs one to two hours. The training would concentrate on practical skills such as safe operating practices, planning the lift and right rigging practices. Employers have to pre-schedule the on-site session.

Following in-class instruction, practical operating instruction and evaluation, and written examination, the trainee would be given an individual wallet certificate and the company would receive a wall certificate. To get certification, trainees need to have an 80% passing score on both written and practical exams.

Included in the crane operator certification program is the following: Instruction manuals, regulations and policies; dangers of high voltage; safety issues; signals and communications; emergency rescue procedures; pre-operational check; types, components and terms; pre-lift set-up and planning; crane configuration and capacity; hammerhead / luffing jib crane operations; wire rope and rigging; climbing cranes; fall protection; crane maintenance; First-aid & CPR; and WHMIS.

To become an overhead crane operator, the minimum basics comprise possessing the mental and physical capability considered necessary to do crane work. The fundamental capabilities which are necessary comprise a normal field of vision, depth perception, coordination, manual dexterity and reaction time. Potential operators must not have the tendency to become dizzy. Operators who do not already have evidence of experience and qualifications should obtain certification. Operators must be qualified to operate the particular kind of equipment that they would be making use of to do their work.
