Counterbalance Forklift Training Cambridge

Counterbalance Forklift Training Cambridge - Counterbalance Forklift Training courses are always in high demand. The Counterbalance forklift is a forklift which is designed along with a weight that counters the balance, equally spreading the weight of the load across the arms of the forklift. Counterbalance forklifts are designed so the weight behind the center of gravity is counterbalanced by the weight on the lift. The load is projected out from the machine's front so it is visible to the operator of the forklift. This type of forklift truck must just be utilized on stable, level ground or on a prepared surface.

Training is necessary for forklift operators to know the correct method to spread the load evenly across the forklift arms. Trainees would know how to raise and lower the load vertically and how to tilt the forklift mast both forwards and backwards between 5 and 15 degrees. People training will be taught the RTITB standards needed for operating the forklift safely. People training will also know the types of attachments for the arms of the forklift.

Types of Counterbalance Forklifts:

Walkie Pallet Trucks

The counterbalance forklift known as the Walkie Pallet Truck is best suited for getting into areas which are both cramped and small. This lift is very maneuverable and capable of accessing almost every tight space.

Walkie Stackers

The Walkie Stacker is another forklift that differs a little form the Walkie Pallet truck when it comes to its lift height. This particular machinery is designed to access tighter areas and has extra lift capabilities for high stacking. Neither of the Walkie line of lifts could be ridden. The driver has to walk behind them.

Rider Pallet Trucks

Rider Pallet Trucks are designed to be ridden. These riding lifts are perfect for dock loading and unloading.

Wave Work Assist Vehicle

The counterbalance forklift called the Wave Work Assist Vehicle can reach heights up to 17 feet.

Sit Down Counter Balanced Trucks

Sit Down Counterbalanced Trucks feature three-wheel and four-wheel forklift designs. These tough and durable trucks are made to be ridden.
