

## Manlift Ticket Cambridge

Manlift Ticket Cambridge - The Elevated Platforms and Manlifts Certification course helps to provide the needed training on the safe operating procedures, work practice, rules and regulations regarding the daily activities for the operators of this machinery. The program has been designed for individuals who are actively involved in these activities or those who have a basic understanding of this machine.

During the last couple of decades, manlifts and aerial platforms have become a common sight in industrial maintenance applications and on construction job sites. These machines provide an easy way to lift staff close to what must be done on a stable platform apparatus, allowing employees to perform tasks with greater comfort and safety rather than being perched on top of ladders or scaffoldings.

Similar to every other device, manlifts are just safe when they are used correctly. As they elevate workers above floor or ground level, accidents can easily occur and this may lead to serious death or injuries for both the manlift operators and any passerby who might be unlucky enough to be standing beneath.

There are a variety of types of manlifts. The majority fall into 1 of 2 categories: the articulating boom lift, that has the capability of both horizontal and vertical movement and the scissors lift, that is capable of moving up and down.
